Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Dulin et al teaches and depicts in Figures 5 and 6 a method of capturing an image by use of a camera (20), the method comprising: placing a scene within a field of vision of a wide angle lens coupled to the camera; (Column 1, Lines 37-53) Dulin et al teaches the use of capturing an image with a camera that has a large field of view. This is viewed by the examiner as a wide-angle lens camera. Dulin et al teaches on Column 2, Lines 14-20 storing image data of the scene in an image collection array. The image collection array is viewed by the examiner as the matrix of pixels in the image sensor. Dulin et al teaches on Column 4, Lines 50-55 digitizing the scene image data into a digitized scene image data and storing the digitized scene image data in memory (22). Dulin et al teaches that the camera can supply a high definition digital signal to an image memory (22). Dulin et al teaches on Column 2, Lines 43-52 selecting a plurality of subsets of the digitized scene image data; Dulin et al teaches that if the communications link contains a return channel, the user can specify a fraction of the overall image which contains the window in which the user wishes to see. Furthermore, Dulin et al teaches that multiple users can select regions. This is viewed by the examiner as selecting a plurality of subsets of the image. Dulin et al teaches on Column 4, Lines 57-67 performing additional processing on the selected subsets of the digitized scene image data. Dulin et al teaches that before the selected images are transmitted to the client's the image data is subjected to compression, edge correction, and warping. Dulin et al teaches on Column 4, Lines 51-63 the process of performing correction of the edges of the selected image. However, the prior art does not teach or fairly suggest the use of performing a distortion compensation process that performs a distortion compensation process to correct for

Application/Control Number: 09/923,820

Art Unit: 2612

the distortion caused by a wide-angle lens in each of the selected subsets and then transmitting

the digitized wide-angle distortion compensated subset image to a destination device.

Any comments considered necessary by applicant must be submitted no later than the

payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to James M. Hannett whose telephone number is 571-272-7309.

The examiner can normally be reached on 8:00 am to 5:00 pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Ngoc Yen Vu can be reached on 571-272-7320. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
